

FREQUENCY SNIFFER (FOR ULTRASONIC HORNS)**Introduction :**

The Frequency Sniffer works with an integrated non-contact probe. The Frequency Sniffer is very handy and fits perfectly in the pockets of your service people. The Frequency Sniffer can check the frequency of converters, boosters, and horns when they are activated by an ultrasonic generator. The measuring distance varies with the amplitude you apply to the vibrating system. For a 20 kHz, 1000 W, generator with 1:2 booster, the minimum distance is 1000mm (39.37").

Technical Data :

Size	L 120, W 60, H 25 (4.72"L x 2.36"W x 1"H)
Weight	100 g (3.5 oz. = <¼ lb.)
Battery	9 V , 6LR61 or 6AM6
Frequency Range	10.00 - 99.99 kHz
Resolution	10 Hz
Tolerance	1 digit (10 Hz)
Display	4 digit LCD
